

## Commitment to the Environment

The Marble Factory recognizes the importance of offering customers products that contribute to a sustainable environment.

Engineered stone bath surface products are exceptionally durable and long-lived. Their surfaces are easily revitalized and maintain their original appearance for many years, making them cost-effective with the added value of less waste. Pre-consumer recycled materials are used in the manufacture of some cultured surface products.

Engineered granite, marble, onyx, Solicoat and Trustone are non-toxic, non-allergic and free of heavy metals. All our products are non-porous and with proper maintenance discourage the growth of mold, mildew and bacteria. They may be regularly cleaned by simply wiping with a gentle cleaner.

We can all do our part for the environment by using common-sense water conservation practices. Turning down the water heater temperature and fixing leaky faucets will help preserve the beauty of the surface as well as save energy. There are many ways to enjoy your bathroom/spa and still limit water usage. Turn off the tap while brushing teeth, use the sink stopper and fill the sink rather than leaving the water running while washing. Be aware that everything that goes down the drain ends up in the municipal water treatment system. Use gentle or natural cleaners and avoid the use of oils.

All of our products meet LEED (Leadership in Energy and Environmental Design) requirements.
